Sequence 1, Application US/09261855A
Patent No. 625605
GENERAL INFORMATION:
APPLICANT: Ross, Jeffrey
TITLE OF INVENTION: THE C-MYC CODING REGION DETERMINANT-BINDING PROTEIN
TITLE OF INVENTION: THE C-MYC CODING REGION DETERMINANT-BINDING PROTEIN
TITLE OF INVENTION: THE C-MYC CODING REGION DETERMINANT-BINDING PROTEIN
TITLE OF INVENTION: (CRD-BP) AND ITS NUCLEIC ACID SEQUENCE
FILE REFERENCE: 960296.95131
CURRENT APPLICATION NUMBER: US/09/261,855A
CURRENT FILING DATE: 1999-03-03
NUMBER OF SEQ ID NOS: 46
SOFTWARE: PATENTIN Ver. 2.0
467
                                                                                                                                                                                                                  500
                                                                                                                                                                                                                                                                                        517
                                                                                                                                            484
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MetAsnLysLeuTyrIleGlyAsnLeuSerGluAsnAlaAlaProSerAs 17

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 10.0 and subtraction to Rot = 50.0. Second strand cDNA was prepared with the primer adapter
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes Genome research. 10 (10), 1617-1630 (2000)

EST's are made from clones being representatives of clone clusters.
clone clusters were calculated from oligonucleotide fingerprints.

                                                                                                                                                                                                                                                                                                                                                                                                                       unsure
                 corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

IMPORTANT: This sequence is not the entire insert of clone 497J21. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone 427A4 (298049) is at 129333 in this
                                                                                                                                                                                                                                                                                                                                                                                                                       oŧ
                                                                                                                                                                                                              This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key.
                                                                                                                                                                                                                                                                                                                                                            Assembly was confirmed by BamHI and HindIII digests. Discrepancy noted in EcoRI digest.

This sequence was generated from part of bacterial clone contigs human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6
49731 is from the library ReCi3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bapac.med.buffalo.edu/ VECTOR: pCYPAC2.

                                                   92447 181369 bp DNA HTG 27-JUL-2001 c sapiens chromosome UNK clone RP11-760D2, *** SEQUENCING IN GRESS ***, 30 unordered pieces.
consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is rightrary. Gaps between the contigs are represented as uns of N, but the exact sizes of the gaps are unknown. His record will be updated with the finished sequence is soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ter: Washington University Genome Sequencing Center

It currently consists of 24 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
